Cardiovascular Morbidities of OSA

IL-6 and IL-10

Evidence for systemic inflammation ,IL6 and IL10 in non-obese children with OSA before and after T & A

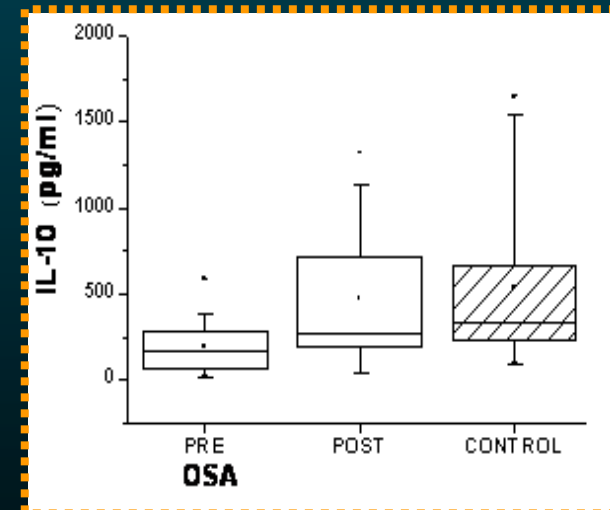

n=20
Non-ob, OSA

↑ IL-6
Pro-Inflammatory

A

↓ IL-10
Anti-Inflammatory

B

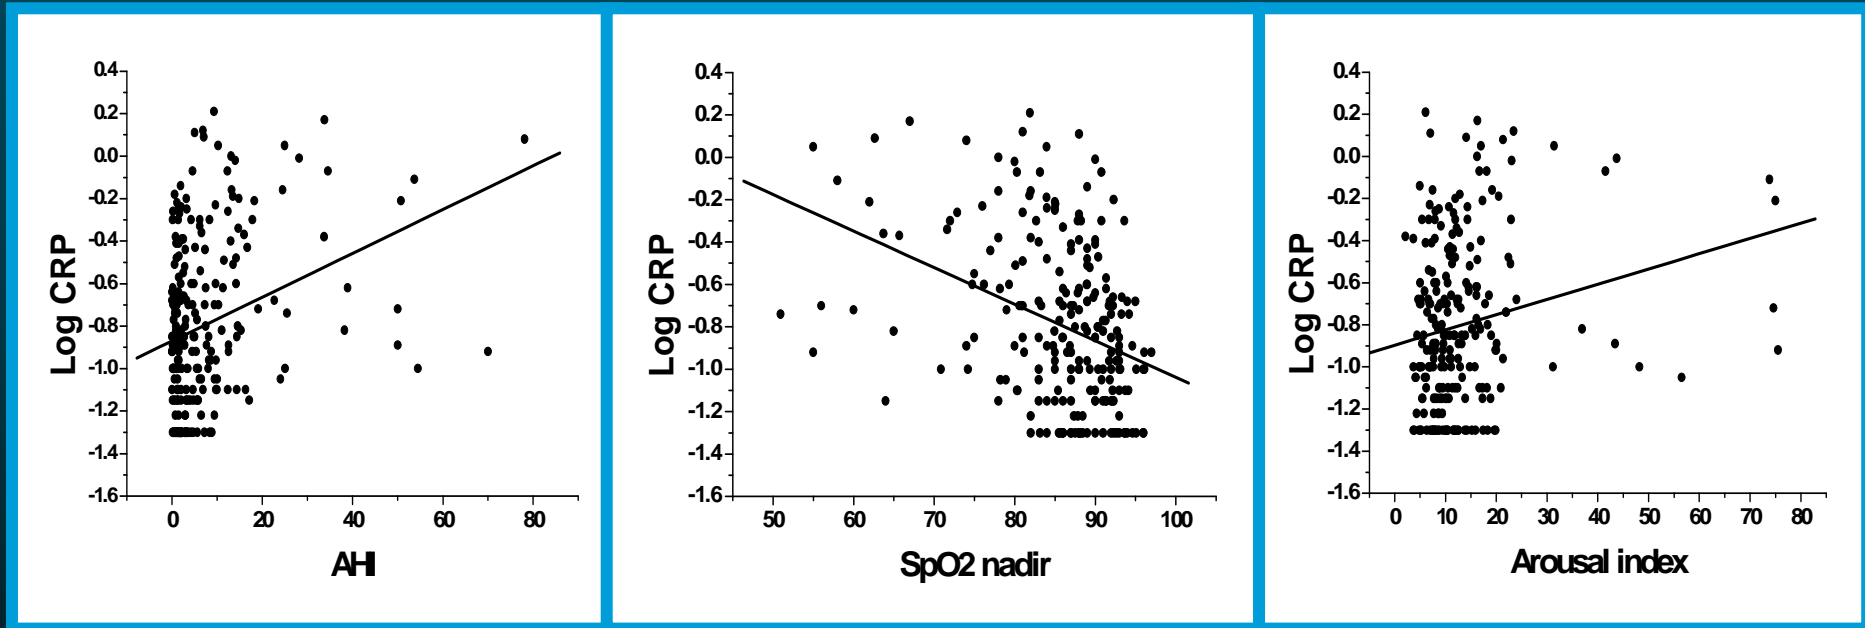

C-Reactive Protein

- ▣ Produced by the liver in **response to upstream IL-6** activity.
- ▣ Is an independent marker of future cardiovascular events.
- ▣ Actively participates in atheromatous lesion formation through **induction and enhanced expression of adhesion molecules**.
- ▣ Is strongly associated with the presence of **obesity**.

hs C-Reactive Protein and OSA

n=110

⊙ CRP levels are reduced after adenotonsillectomy

$r= 0.30, p<0.0001$

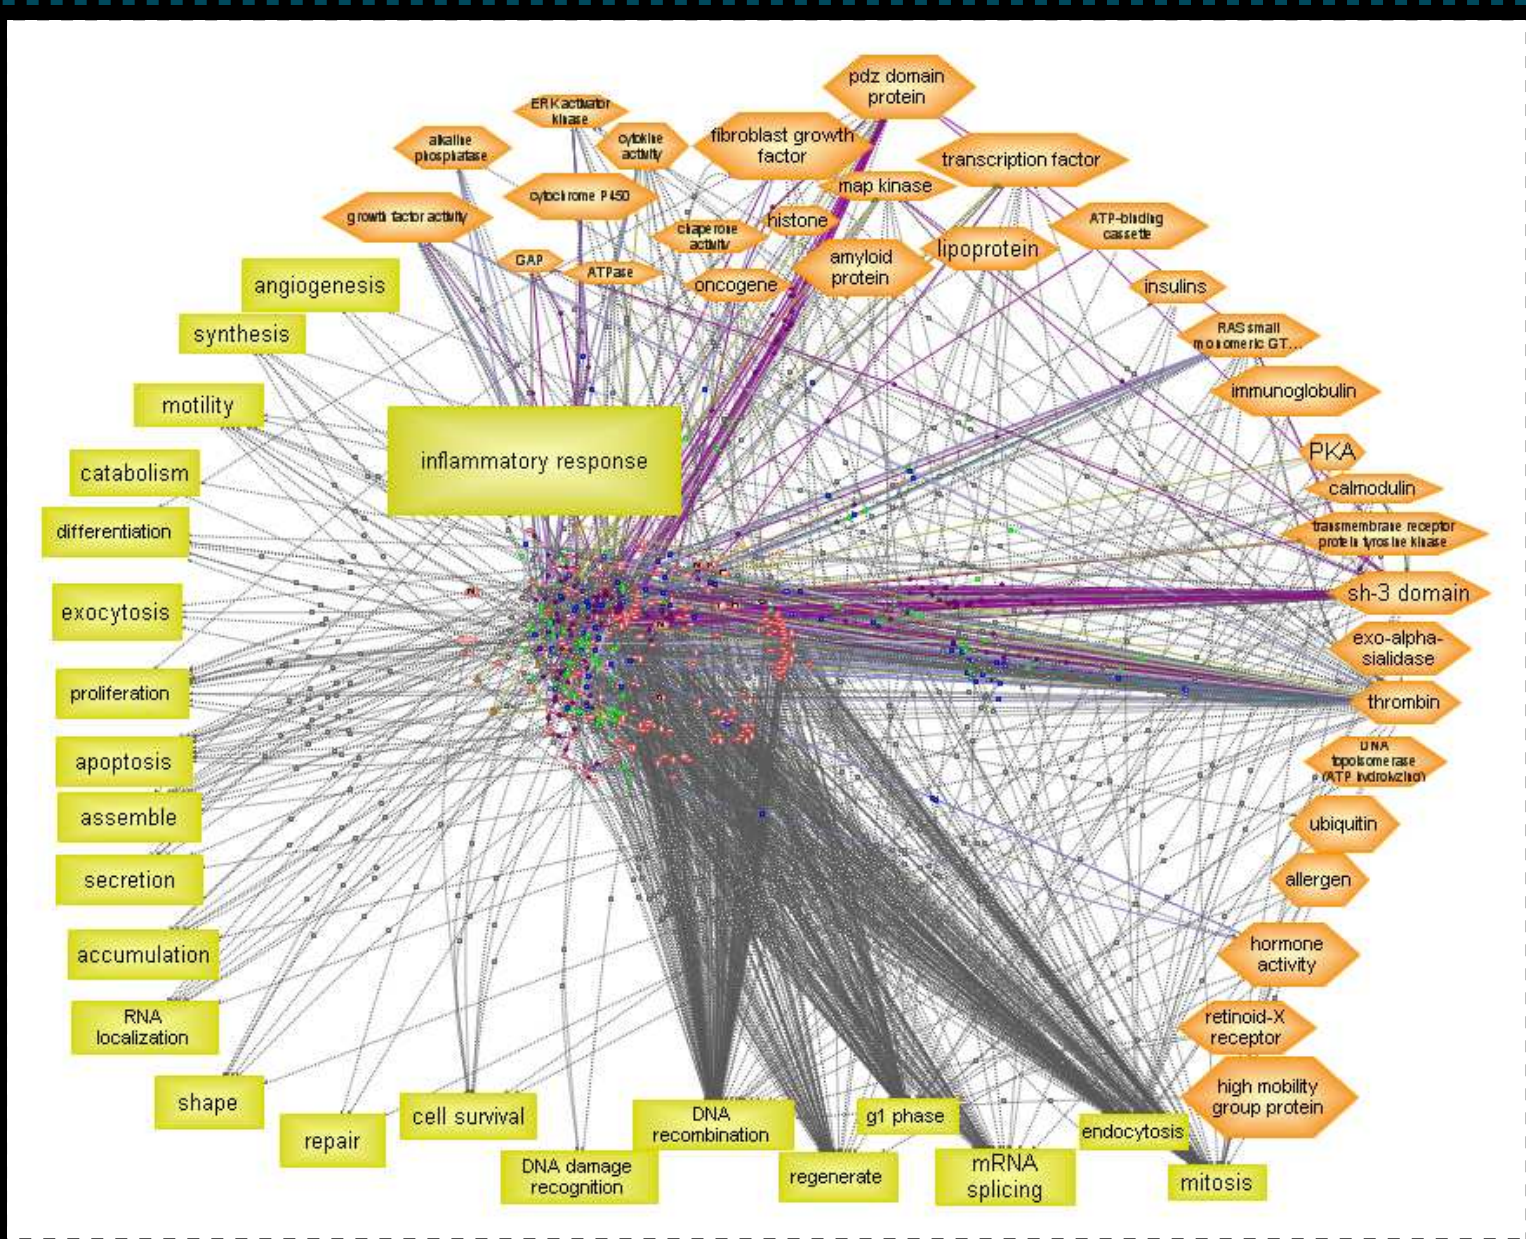

$r=-0.32, p<0.0001$

$r=0.21, p=0.001$

All correlations remain significant after controlling for relBMI

CATECOLAMINAS

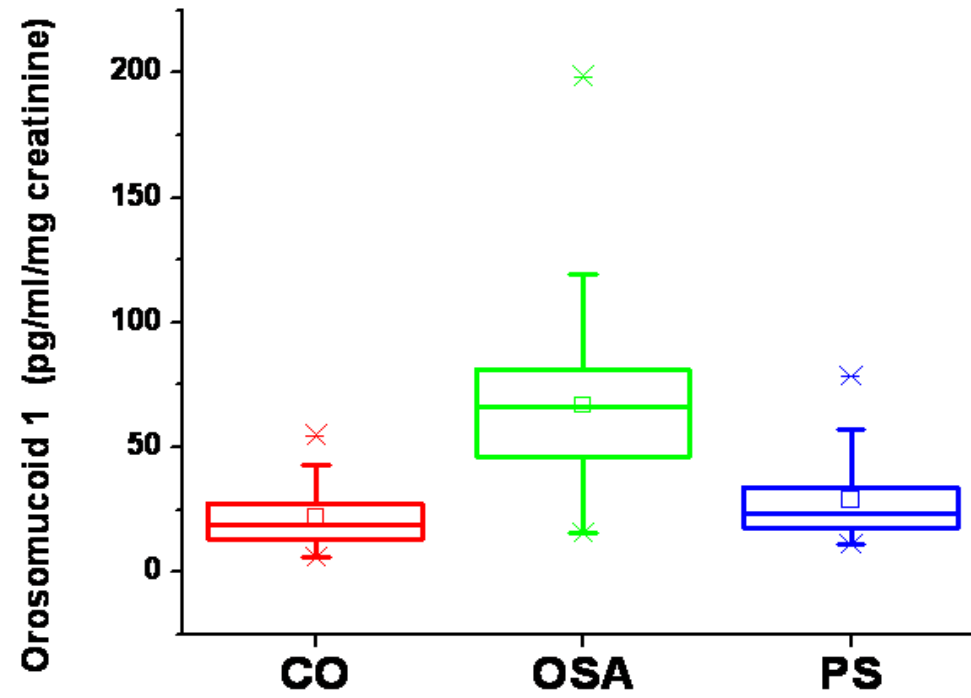

2D-DIGE Proteomic Approaches Reveal Urine Candidate Biomarkers in Pediatric Obstructive Sleep Apnea

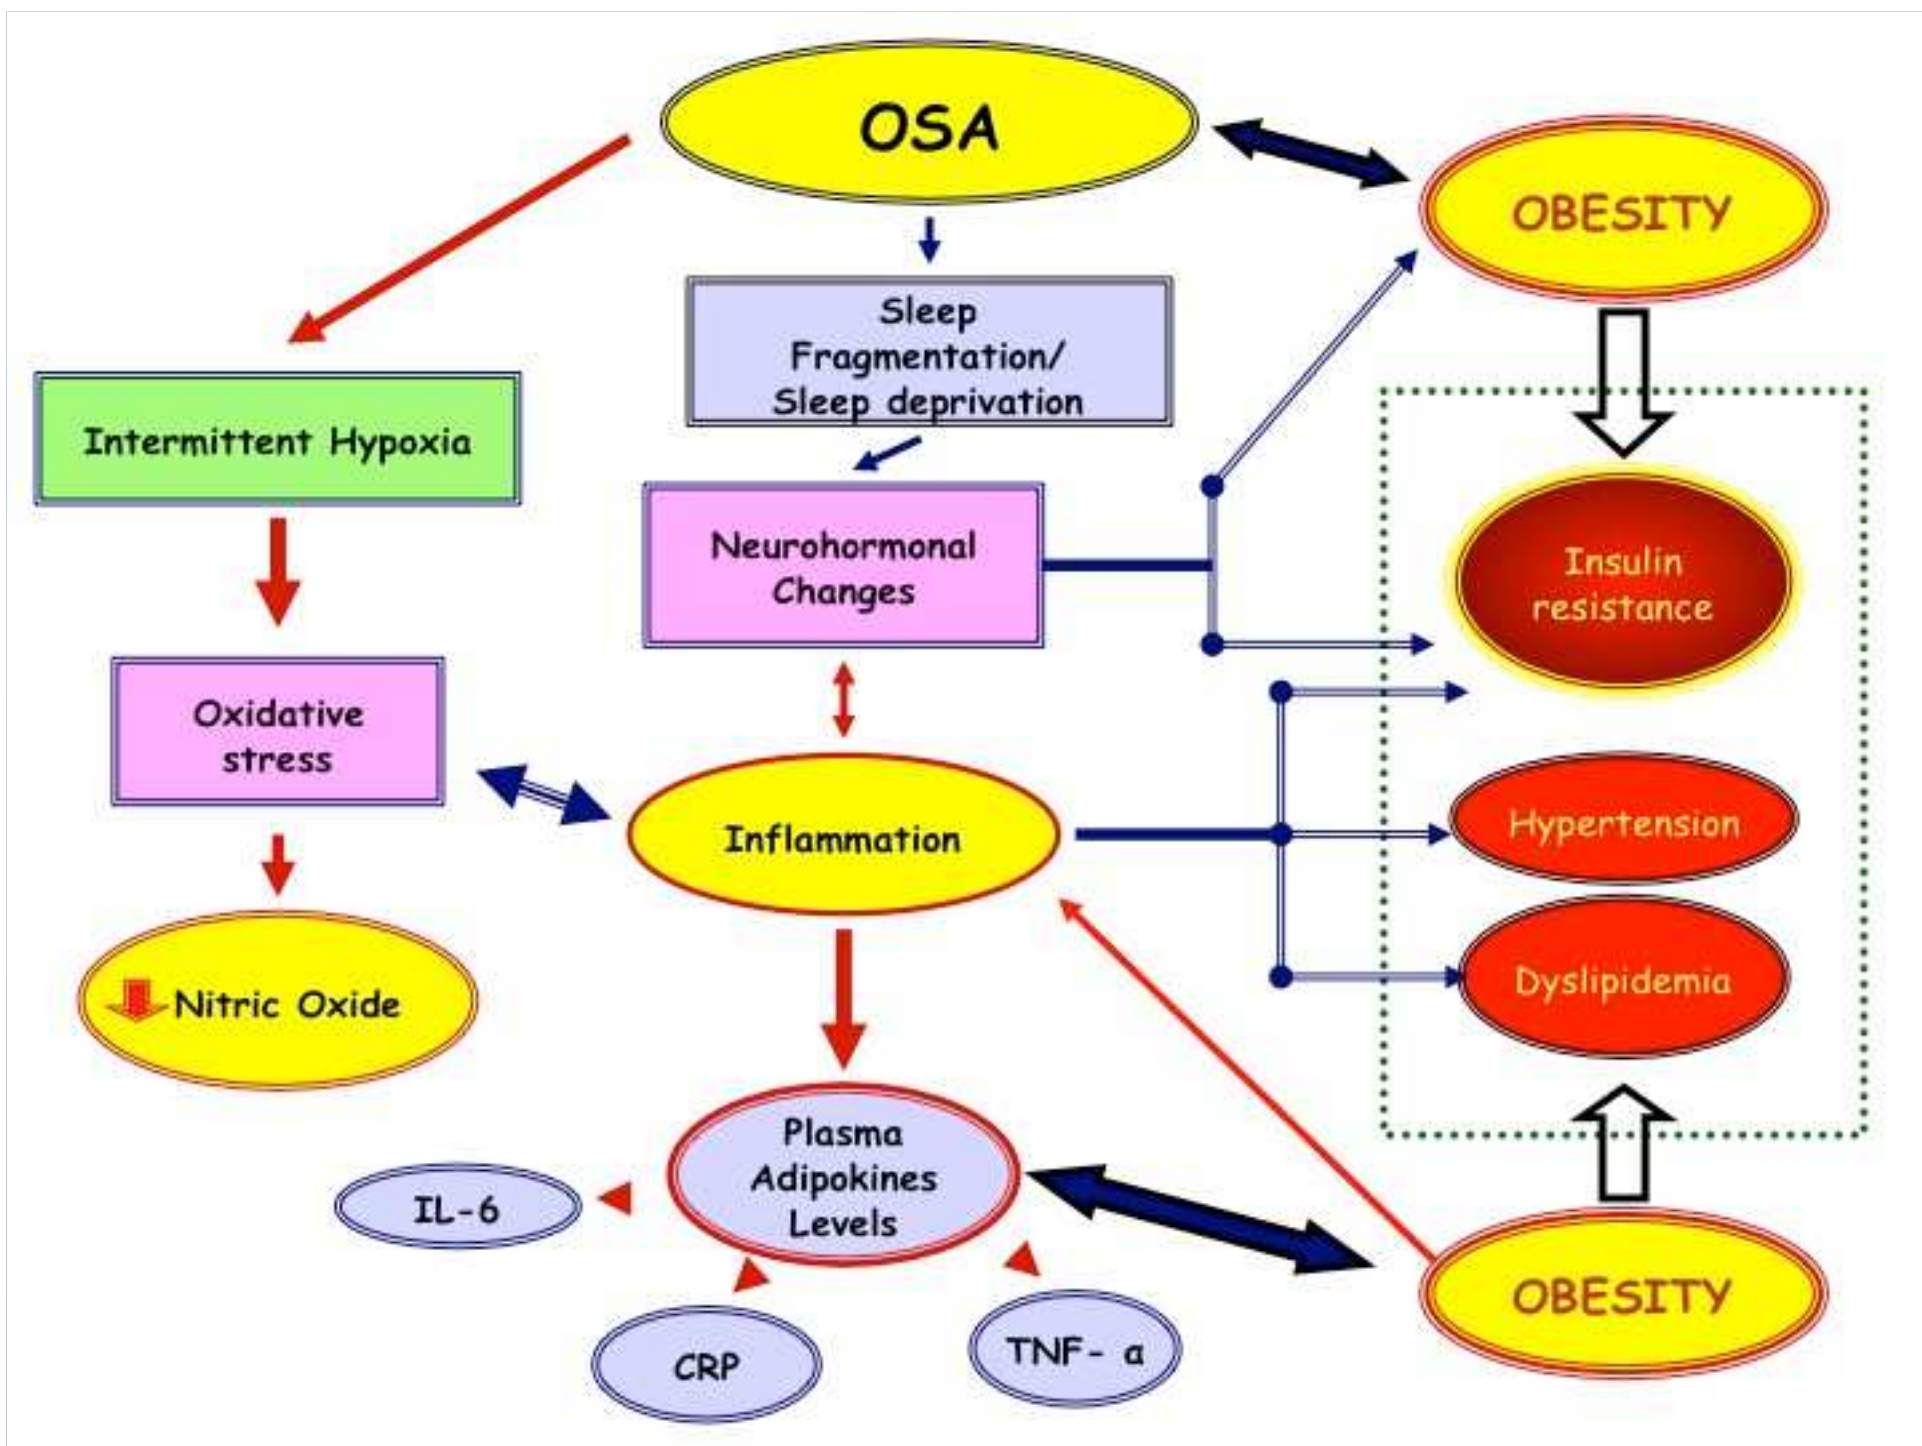

David Gozal, MD *, Saeed Jortani, PhD#, Ayelet B. Snow, MD, Leila Kheirandish-Gozal MD*, Rakesh Bhattacharjee, MD, Jinkwan Kim, PhD *, Oscar Sans Capdevila, MD

Am J Respir Crit Care Med 24 sept 2009

- *Subjects and Methods:* Morning urine proteins from 60 children with polysomnographically confirmed OSA and matched children with either primary snoring (PS; n=30) or controls (CO; n=30) were assessed with 2D-DIGE and mass spectroscopy.
- A total of 16 proteins that are differentially expressed in OSA were identified, and 7 were confirmed by either immunoblots or ELISA.
- *Conclusions:* Proteomic approaches reveal that pediatric OSA is associated with specific and consistent alterations in urinary concentrations of specific protein clusters. (uromodulin, urocortin 3, orosomucoid 1, and Kallikrein)

Normal Vessel Wall

Adipose Tissue

- IL-6
- TNF- α
- IL-1
- Leptin
- Adipokines

Thrombus

Liver

- Acute Phase Reactants such as:
- Serum Amyloid A
- CRP

Smooth Muscle Vessel Wall in OSA

- Monocyte
- Foam Cell
- Leukocyte
- Platelet

Gozal D & Kheirandish-Gozal
Am J Resp Crit Care Med.2008

Normal Vessel Wall

Adipose Tissue

- IL-6
- TNF- α
- IL-1
- Leptin
- Adipokines

Thrombus

Liver

- Acute Phase Reactants such as:
- Serum Amyloid A
- CRP

Formed and released into the circulation

Smooth Muscle Vessel Wall in OSA

Gozal D & Kheirandish-Gozal
Am J Resp Crit Care Med.2008

Circulating monocytes activate
 express monocyte chemoattractant protein -1
 induce expression of adhesion molecules
 reducing expression & activity of endothelial nitric
 oxide synthase
 promote apoptosis
 Migration and foam cell formation

Adipose Tissue

IL-6
 TNF-α
 IL-1
 Leptin
 Adipokines

Thrombus

MCP-1

Acute Phase Reactants such as:
 Serum Amyloid A
 CRP

GENETIC AND METABOLIC PARAMETERS IN SNORING CHILDREN

Peripheral Blood Leukocyte Gene Expression Parameters in Habitually Snoring Children: Polysomnographic Findings

Abdelnaby Khalyfa, PhD^{1*}; Sina A. Gharib, MD^{2*}
Rakesh Bhattacharjee, MD^{3,5}; Mohamed Hegazi, MD⁴
*These authors contributed equally to the work.

Table 1—Demographic and polysomnographic characteristics of the initial cohort

	PS (n = 30)	Controls (n = 30)
Age (years)	6.9 ± 0.6	7.0 ± 0.5
Male (n)	16	15
African American (n)	10	10
BMI (z-score)	0.63 ± 0.22	0.47 ± 0.25
Sleep latency (min)	23.8 ± 15.4	23.4 ± 14.2
REM latency (min)	145.5 ± 43.2	146.2 ± 44.4

Metabolic Parameters in Children with Normal Sleep

Hegazi, MD¹;

Figure 2—Gene expression heatmap of “leading edge” members of enriched gene sets in PBL of children with PS vs. controls. One-dimensional hierarchical clustering of expression values has been performed to better depict distinct transcriptional patterns between the phenotypes.

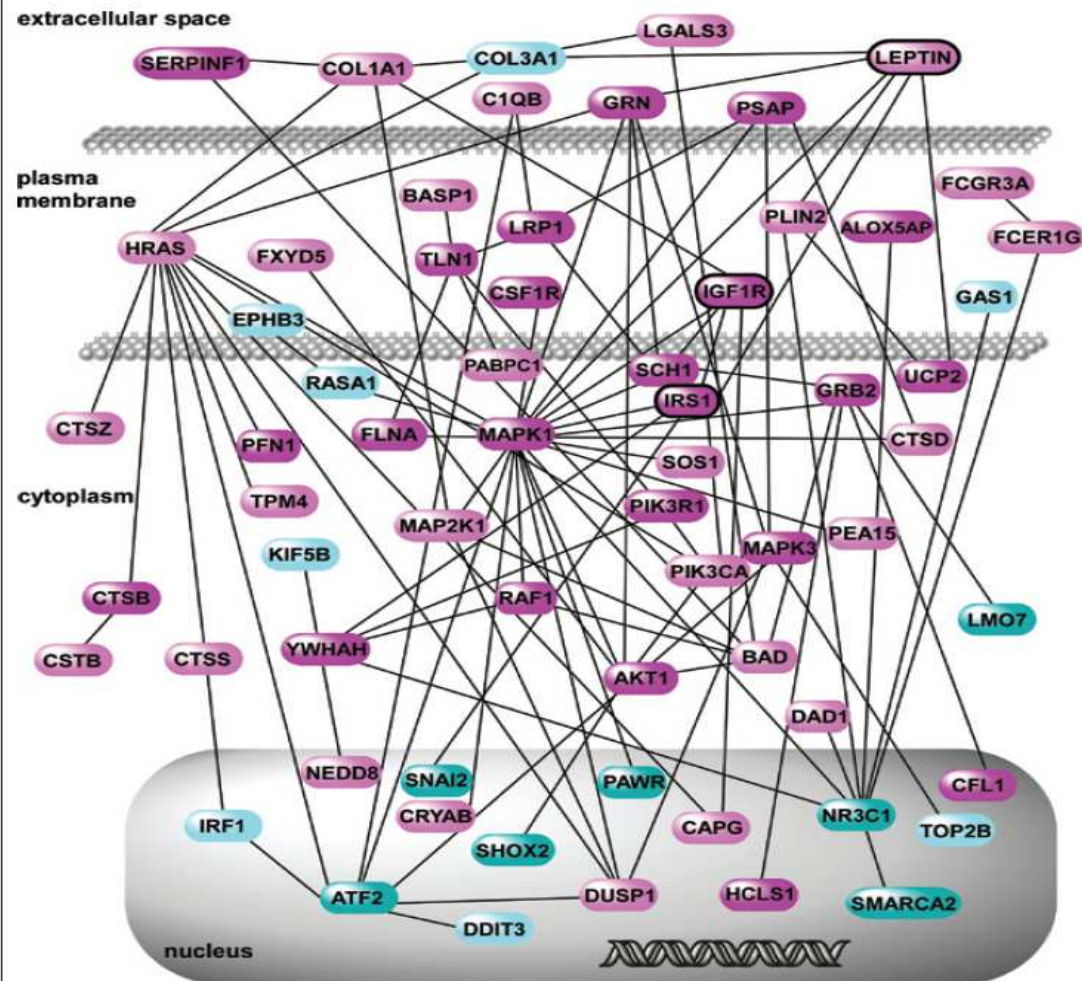

Figure 4—Gene product interaction network constructed from gene members mapping to the insulin signaling, adipocyte differentiation and obesity module (see Figure 3). Nodes up-regulated in PS are shown in cyan, and those up-regulated in controls are colored in magenta. Members of the leading edge are highlighted in darker shades. Among the complex interactions, note the relational links between leptin, IGF1R, and IRS1 as discussed in the text. A complete list of gene members is provided in the supplementary Table S2.

Modelo de Triple Riesgo de Morbilidad en SAHOS

Environment

SAHOS Severity

Individual
Susceptibility
(genetics!!!!)

Gozal & Kheirandish, 2006

CONCLUSIONES

- Los estudios de sueño son costosos y no es posible atender a toda la población pediátrica.
- Necesitamos nuevos métodos de diagnóstico (screening) para el SAHOS en niños.
- SAHOS en niños también produce marcadores biológicos en plasma y orina.
- Tenemos marcadores genéticos obtenidos mediante gene-array (técnicas complejas y caras.. **DISPONIBLES AQUÍ**).
- **Estamos en fases iniciales , resultados PROMETEDORES aunque nos faltan más estudios (TRABAJO EN EQUIPO) de identificación de cuáles son el / los marcadores ideales.**
